

BRACE YOUR CONTAINER DOORS SAFE WITH BENSTOP

A purpose-built container door brace, the BenStop GP20/40 is designed to hold a single door open at a fixed 90-degree position for safe, predictable access. Developed to enhance safety and reduce the risk of incidents and injuries.

Fits ISO 20' & 40' Containers

Suitable for use across standard general-purpose 20ft and 40ft shipping containers.

Easy-grip Handle

An ergonomic handhold provides a secure grip, allowing the user to handle or position the brace, comfortably and safely.

Engineered, Rated & Proven

Designed and validated through rigorous testing to ensure reliable performance in real-world container environments.

Built-in Magnet

When not in use, the brace can be attached to the interior or exterior of the container door or wall via its magnet for convenient storage.

Withstands winds <60 km/hr

Rated to safely hold container doors open in wind speeds of up to 60kph, without causing any permanent damage to the container door, hinge or corner post.

Corrosion Resistant

Powder-coated high-strength, heat-treated casting alloy. Designed and manufactured to withstand tough, real work-site conditions.

Use on left and right sided doors

Optimised for ease of use, the brace can be used on both left and right sided doors simply by flipping its orientation.

DID YOU KNOW?

Uncontrolled container doors - whether moved by wind, pressure, or other unintended forces - present a significant WHS hazard, contributing to costly injuries and downtime across global industries, with resulting losses reaching into the billions each year.

Get to know the BENSTOP GP20/40 DOOR BRACE

Jaw

The jaw of the brace must fit flush against the door surface.

Foot

The foot of the brace must slot in snugly behind the lashing bar.

Storage

The brace can affix on the container wall or door when not in use.

Positioning

The door may need to be held and maneuvered to ensure the brace slots into position.

Placement

As lashing bar positions can vary between container manufacturers, various brace placement locations were included in the WLL rating tests.
