

Safety Information & Limitations of Use

BenStop GP20/40 Door Brace

The BenStop GP20/40 Door Brace is intended for use on 20 ft and 40 ft general purpose containers equipped with internal cargo lashing bars located within the corner post recess.

This product is intended as a risk-reduction device only and does not constitute a standalone safety solution. It must not be relied upon as the sole means of hazard control.

A site-specific risk assessment must be conducted prior to use. The container doors, lashing bars, and BenStop GP20/40 Door Brace must be inspected prior to each use for damage, wear, or signs of failure. If any damage, wear, or signs of failure are identified, the product must not be used.

The BenStop GP20/40 Door Brace should be used as part of a broader safety system and only where it has been assessed as compatible with site-specific conditions, existing control measures, and safe systems of work.

Incorrect application or use on non-compatible containers may result in product failure and an increased risk of injury.

Use of this product on smaller containers or with retrofitted lashing bars is at the owner's risk.

The product must not be modified, altered, or used outside of its intended purpose.

The user is responsible for ensuring the product is suitable for the intended application and used in accordance with all applicable safety requirements.
